# COURIER.

TO THINE OWN SELF BE TRUE AND IT MUST FOLLOW AS THE NIGHT THE DAY, THOU CANST NOT THEN BE FALSE TO ANY MAN.

BY JAYNES, SHELOR, SMITH & STECK.

WALHALLA, SOUTH CAROLINA, APRIL 6, 1890.

NEW SERIES, NO. 53.—VOLUME 1.

## DEFENSE OF THE HONEY BEE.

THEY PROMOTE THE PROPER MATURITY OF FRUITS, BUT NEVER HINDER IT.

Never Break the Fruit, But Repair the Damage Done by Wet Weather and Birds.

Editors KEOWEE COURIER: I want to say a word in defense of the much-abused honey bee. Every summer we hear more or less complaint about the bees eating up the grapes, damaging peaches, etc.

It is strange some people don't know their best friends. That the little honey bee is a great benefit to the fruit grower is well known to everyone who has taken the trouble to inform himself on the subject. It has been proven time and again that the bees never break the hull of the grape. To prove this you may take a perfect bunch of grapes and place it in a hive of bees and it will remain there until it dries up, and will never be disturbed by the bees unless the skin is broken. After the sparrows break the hulls, or wet weather bursts the grapes open, then the bee comes in, takes up the juice that is going to waste, and right there is where the bees come in with their help. They take up the juice before it ferments and runs down on the other berries and spoils them, which it will do inside of forty-eight hours, if the bees do not clean up the cracked berries. So instead of doing harm they are a benefit to the grape.

But this is not the only place where the little busy bees come in with their help. The first and great purpose for which bees were created was for aiding in the fertilization of flowers of different kinds. The honey, as food for man, comes in as secondary. To prove this we only find honey or nectar secreted in such flowers that are incapable of self-fertilization, while those capable of being fertilized by the agency of the wind, etc., secrete no nectar. For example, we find no nectar in wheat, corn, oats, rye, etc., all these being capable of self-fertilization by the rustling of their stalks in the wind. Then there are all the clovers, the squash and the vine family, none of which are capable of being fertilized through the process applicable to the first. All these last named secrete honey for the sole purpose of enticing bees, flies, etc., for fertilization, so that they may mature seed and perpetuate their kind.

The same thing holds good with trees of all kinds. In fact, if it were not for the bees there would be very little perfect fruit in the country, because to make fruit set and grow to perfection the pollen must be carried from one bloom to another, and the honey bee is the main agency for this work, and should be welcomed in every orchard and vineyard. It is claimed for the industry of bee-keeping what can be claimed for no other, namely: It does not take from any other thing that which would make it more valuable in returning the same, but on the contrary adds to its value.

R. R. CAMAK.

MARCH, APRIL, MAY.

These are the Months in Which to Purify Your Blood.

This is the season when your blood is loaded with impurities, accumulated during the winter months from cold confinement, rich food, and other causes. These impurities must be driven from your system or they may breed serious disease and cause untold suffering. Hood's Sarsaparilla is the greatest and best blood purifying medicine it is possible to obtain. It is what the millions take in the spring. It will purify and enrich your blood, create an appetite, tone up your system and give you sound, robust health.

Russell Sage's Wealth.

Russell Sage will be 81 years old on the 4th of next August. He does not look his age by almost twenty years. He arrives at his office every morning at 9.30. He is a director in thirty-eight different companies, from which he draws in director's fees ranging from \$5 to \$20 per meeting, over \$20,000 annually. This about covers his whole cost of living expenses, including his stable and his charities. He banks the income that he derives from his \$150,000,000 investments, and his wealth is computed at \$175,000,000.

When you ask for Dr. M. A. Simmons' Liver Medifine, see that you get it, and not some worthless imitation.

Old Glory Floats Over Malolos.

MANILLA, March 31.—(3.55 p. m.)—The American flag was raised over Malolos at 10 o'clock this morning. The Kansas regiment and the Montana regiment, on entering the city found it deserted, the presidencia burning and the rebels retreating toward the mountains in a state of terror.

## DOINGS AT HOLLY SPRINGS.

What the Moonshiners May Expect—Ready to Get to Work on the Farms.

HOLLY SPRINGS, April 4.—We are all ready for making a crop—that is, the talking is all done; nothing now to do but to get to work.

Mr. Ira Butt has declined having his express water carrier patented. The dove and whippoorwill, combined with the ring of Mr. B. Blackwell's hammer, tell us that planting time is drawing near.

We presume the game law has expired, as Messrs. P. Chambers and J. W. Smith have mustered out.

Mr. B. E. Chambers has the first case of the grip—grip on his plow handles.

Gober (p. c.) says de moonshiners may look out now, for dat, ole Prosument McKinley is kum 'n' gwine 'round wid Corbin.

Col. H. S. VanDiver, of Walhalla, was in this vicinity one day recently. We are always glad to meet the Colonel.

We hear some complaint about our road hands not working. The contractor is the man we are going to look after. We have paid our money and we want the roads worked in our district.

Y. E. S.

An Important and Valuable Index.

There is no better basis upon which to estimate the civilization, or rather the material advancement, of a people than the prevalence of good roads among them. They form the local arteries of trade, reaching out to fountain heads from which the waters of trade are gathered to form the great streams and oceans of commerce. Good roads are good taxpayers, because they relieve the farmers and tradesmen of the country of their heaviest burden, for it is well known that one of the most constant, most troublesome and most wearing of all the taxes they pay is the transportation of their products to market over bad roads.

Prosperous communities, therefore, are made by good roads, and, in turn, good roads are an index to the prosperity of a community.—J. B. Killebrew, in the Southern States Magazine.

W. F. Rawl, New Brookland, S. C., writes: Have used Dr. M. A. Simmons' Liver Medicine many years, and consider it the best liver medicine made. I regard it a miracle compared with Zella's regulator.

Malolos, but not Aguinaldo.

Well, Malolos is taken, but not Aguinaldo and his army. Contrary to all military laws and usages guiding our sapient war department, the Filipino leader did not make a last desperate stand at his capital and permit his forces to be annihilated. He "sloped," and will send in his card later from the jungle. "Diddle, diddle, come and be killed," sang the war department; but Aguinaldo never heard of Mether Goose, and "declined the invitation like a dam," as one of our own rebels remarked about 35 years ago. This of course shows what a savage Aguinaldo is. But, as we have pointed out more than once, in campaigning against savages we must not count on their following civilized precedents. The Filipinos are natural guerrillas. They are not banking after a Sedan. It suits them better to adopt the tactics the Spaniards and Russians found so effective against the legions of the great Napoleon. Of these tactics we will learn to our cost before we get through in the Philippines.—The State.

Hanged for Their Crime.

TORY, Ala., March 31.—Richard Hale and Thomas Johnson, white men, and Sam Rives, colored, were hanged at Tory to-day for the brutal murder of Mrs. Ira Meyers, an aged woman, and her daughter-in-law, Mrs. E. Meyers, whom they killed and attempted to burn at Josie, in December last. Robbery was the incentive for the deed. A plot hatched by the prisoners to escape from the jail was frustrated last night.

Not as Well as Expected.

A little Rutland, Pa., girl is very much up to the times. Ather prayers the other night after the usual appeal for her loved ones she added: "And please, Lord, take care of yourself, too, for if anything should happen to you we couldn't have any one but Mr. McKinley to depend on, and he isn't doing as well as papa expected."

If you don't want to be an old bachelor get in the push—get married.

## BALTIMORE IN FINANCE.

THE FINANCIAL INFLUENCE OF THE WHOLE SOUTH GROWING GREATER.

New York and Philadelphia Contribute to the Advancement of the South.

Baltimore and the South are to be jointly congratulated at the commanding financial power which this city is now developing, because it means the most powerful influence for Southern upbuilding which has ever been turned upon that section. New York and Philadelphia have contributed largely to the material advancement of the South; in fact, it has been estimated that New York investments in the South aggregate as much as a billion dollars; and neither New York nor Philadelphia has ever made the development of the South a leading feature of its financial operations. Baltimore, on the contrary, is so pre-eminently Southern by virtue of its location, its sentiment and its trade interests that it must look to the expansion and upbuilding of that section as its chief field of operation.

In the South there is undeveloped wealth sufficient to profitably employ practically unlimited capital and to furnish a broad field for the greatest business energy and ability of this remarkable generation. The natural resources and advantages of the South are great enough to create industries and trade equaling in magnitude the entire mining, manufacturing and commercial interests of the country. Economic changes in finance and in the world's general business interests brought about by the revolutionizing influences of modern inventions and methods—changes beyond human control—are now forcing the world's manufacturing interests to the place of cheapest production—the place where the raw material is found in the greatest abundance and most cheaply turned into the finished product. This means that the South is to be the greatest manufacturing country on the face of the earth. What that means can be faintly comprehended when it is remembered that England's wealth and power are based on her manufactures; that the United States has \$6,000,000,000 capital invested in factories whose annual product is valued at over \$10,000,000,000, or three times the total annual value of all agricultural products of the country, and that the 5,000,000 hands now employed in the industrial interests of this country receive about \$2,500,000,000 a year in wages. Of this vast industry—the foundation of our marvelous national progress—the basis on which New York, Philadelphia, Boston, Chicago, Pittsburgh and the other great cities of this country rest—the South has now less than one-tenth. The middle-aged man of to-day may live to see the South's industrial interests equal in capital, in production and in wealth-creation the entire business now represented by these stupendous figures for the whole country. Thirty years from now the 25,000,000 people of the South, by natural increase alone, based on the percentage of increase for a century, will have advanced to nearly or quite 50,000,000, and it must be remembered that our entire country had but 51,000,000 inhabitants in 1880 and 62,000,000 in 1890. To attempt to picture the future progress and prosperity of this section would invite the criticism that the writer must be a visionary enthusiast. Facts which cannot, however, be disputed prove all that has been said and point to a future of material advancement perhaps never equaled.

The construction of the Nicaragua canal will revolutionize the world's commerce in favor of this country and bring about a marvelous activity and prosperity at all our South Atlantic and Gulf ports. This change in the world's shipping interests, and the development of the West Indies, which will inure to the benefit of the South, will make this section as dominant in commercial affairs as in manufactures. We have here a combination on which to build up great cities and vast business interests, and for the support of a dense population such as is found nowhere else on earth. With Southern iron being exported to Europe and Asia at the rate of nearly a thousand tons a day, as was done during 1898, with great steel plants under construction to strengthen our command of the world's iron and steel trade, with cotton manufacturing rapidly centering in the South and the leading mill companies of New England building branch mills in this section,

with Southern ports showing a rapid expansion in their foreign commerce, it would be hard to forecast the progress and prosperity of the next ten years.

In view of these facts, it is most opportune that Baltimore is becoming sufficiently strong financially to furnish the capital needed for the development of the South. Some years ago the Mercantile Trust and Deposit Co. was organized, largely for the purpose of financing Southern railroad and municipal securities. Its great success caused others to see the opportunity, and then came the Baltimore Trust Co. and the Maryland Trust Co., both of which have been active factors in Southern affairs. The Mercantile Company has a capital of \$2,000,000 and a surplus of \$8,000,000; the Baltimore Trust and Guarantee Co.'s capital is \$1,000,000 and surplus \$1,500,000; the Maryland has a capital of \$1,000,000 and surplus of \$600,000. A few months ago the Continental Trust Co. was organized with a capital and surplus of \$4,000,000, largely over-subscribed; the Citizens' Trust Co., with a capital and surplus of \$2,500,000, and now the International Trust Co. has been organized with a capital and surplus of \$3,000,000, and \$12,000,000 of bona fide subscriptions were received. In addition to these we have the Maryland Casualty Co., probably the largest company of its kind in the United States; the American Bonding and Trust Co., capital and surplus \$1,500,000; the Fidelity and Deposit Co., capital and surplus \$2,000,000; the Guardian Trust Co., the United States Fidelity and Guaranty Co., and several other strong companies.

The total actual cash capital represented in these companies is over \$25,000,000. Their success has been so great that the selling value of their stock runs from 60 per cent above par to 300 per cent, and even these prices are not near as high as for similar stocks in New York. The organization of these great financial enterprises is simply a new form of banking, with broader powers than national banks possess, enabling them to finance great industrial and railroad undertakings. With this vast aggregation of wealth concentrated upon the development of the South there must come a more rapid advancement of that section than we have ever seen.

The South affords room for the profitable employment of all this capital, and the operation of these companies will bring Baltimore and the South into the closest trade relations. The field is broad enough for the fullest development of all these strong financial companies. With their influence, backed by that of our private bankers and national banks, Baltimore promises to take a leading position as a great financial center—a position commensurate with its many advantages.—Manufacturers' Record.

## CORNELL'S SOUTHERN TOUR.

THE OFFICIAL SCORE OF THE FIRST GAME OF THE SEASON FOR CLEMSON.

Errors on the Part of Some of Clemson's Men Cause the Score to Swell Against Them.

Last week we gave the result of the game at Clemson. For some reason the official score, which we had made arrangements to get in time for publication last Thursday, was delayed and came too late.

CLEMSON COLLEGE, March 30.—The first game of the season for Clemson College was played here yesterday against Cornell University of New York, resulting in a score of 14 to 3 in favor of Cornell.

The game was much more closely contested than the score would indicate, because several errors on the part of the Clemson men allowed the score to run up greatly.

The Cornell team arrived here on the 1 o'clock train and were driven to the College.

SUMMARY.

CLEMSON.—A. B. R. H. P. O. A. E. Shaw, c..... 5 2 1 5 1 1  
McMakin, p..... 5 1 3 2 10  
Gray, 1b..... 4 1 1 14 1 4  
Hunter, 2b..... 4 1 1 1 4  
Whitson, 3b..... 3 1 1 2 1  
Ordinone, 3b..... 4 1 1 1 3  
Mauldin, ss..... 4 1 1 1 1  
Cole, lf..... 4 1 1 1 1  
Riedinger, cf..... 4 1 1 1 1  
Bamberg, rf..... 4 1 1 1 1  
Total..... 38 3 5 24 21 9

Stolen bases, Hunter; 2-base hit, Gray; 3-base hit, Shaw. Struck out—By McMakin, 5; base on balls, by McMakin, 4.

CORNELL.—A. B. R. H. P. O. A. E. Stratton, ss..... 5 1 1 1 1 1  
Ginger, c..... 3 2 1 10 1 1  
Merriugh, 1b..... 5 4 3 9 1 1  
Young, 2b..... 4 1 2 2 5 1  
Bole, rf..... 5 2 2 1 4  
Robertson, 3b..... 5 2 1 1 4  
Stanton, lf..... 5 1 1 1 1  
Dougherty, 2b..... 4 1 2 5 1  
Johnson, cf..... 5 1 1 1 1  
Total..... 40 14 11 27 19 4

Stolen bases, Ginger and Bole; 2-base hits, Merriugh and Bole; 3-base hits, Merriugh. Struck out—By Young, 5; by Bole, 4. Umpire—Sanders, of Cornell. Scorers—Hill and Blair.

Cornell Outclassed at Augusta.

The Cornell boys "ran against a snag" at Augusta, Ga., Thursday afternoon last, in the game played there with the Brooklyn team, which is practicing at Augusta, for entry in the National League. The Cornell boys played well, but the Brooklyn team ran over them with a score of 20 to 2.

Mercer University Boys Defeated.

MACON, Ga., March 31.—Cornell defeated Mercer University to-day in the opening game of the season. The attendance was good and the game was exciting throughout, the two teams being evenly matched. Score: Cornell, 11; Mercer, 7.

Georgia was "Easy" for the Hibernians.

On April 1st, at Atlanta; Cornell defeated the College of Georgia by a score of 11 to 5. The Constitution says: "If there is a single point in which the Georgians equal the Cornellites they kept it carefully concealed."

Derangements of menstrual functions produce miscarriage. Simmons' Squaw Vine Wine or Tablets correct derangements.

Railways and Roadways.

When a railway company undertakes to extend its tracks, or to put in a switch, or to do any other work of this sort, the first thing done is to have their engineer—an educated and trained specialist—prepare the plans, set the stakes and superintend the job. They never trust a booby; they do not trust even an experienced roadmaster, except with expert supervision. When our County Commissioners are charged with the care of a road, they push the responsibility on to some ignorant pike commissioner, and apparently trust the devil to superintend. He does usually, and very effectively, with the result that we get less for our money than any other county hereabouts.—Dayton (Ohio) Herald.

A community is not likely to get rich while its roads are poor.

How is the road in front of your house?

The State can get more out of her convict labor by placing it on the public roads than in any other way, and would be decidedly more profitable than letting them lay in jail in idleness.—New Smyrna (Florida) Breeze.

CASTORIA. The Kind You Have Always Bought.

It takes out all impurities from the blood. When Liver is removed, nature takes right hold and completes the cure. Price, \$1.00 a bottle. At all druggists. If there is constipation, take Ayer's Pills. Price, 25c a box. Write to the doctor all the particulars in your case. You will receive a prompt reply without cost. Address, Dr. J. C. Ayer, Lowell, Mass.

A Useful, Strong P-Ste.

This article, so universally useful in the home, can be really depended upon to do its duty well, if prepared as follows: In half a quart of warm water dissolve a small teaspoonful of alum, and when it cools, add enough flour to make it into a thin paste. Stir it till smooth, then add a pinch or so of powdered camphor, and pour on the paste half a cupful of boiling water. When well mixed and thickened, turn into a receptacle with a cover, and store it in a dry corner of a cupboard. When required for use, soften a small quantity with warm water.

If your efforts to do good are not appreciated by your fellow-men, you may have at least this pleasing consciousness, that they are appreciated by your Heavenly Father.

## WESTERN AND SOUTHERN IRON COMBINE.

Hereafter It Proposes to Operate Its Own Mines and Reduce the Cost of Pig Iron.

BIRMINGHAM, Ala., March 31.—It was openly announced yesterday that all active rolling mills in the Birmingham district are in the Western and Southern bar iron combine, whose books of subscription were opened in New York yesterday.

Included are the Alabama mill at Gate City and the Birmingham mill, together employing twenty-five hundred men and both in full operation. The combine has also acquired one furnace plant and has obtained options on others. Coke ovens, pig iron and ore mines, and dolomite quarries are also included in the operations.

The combine proposes to mine its coal and ore and make its coke and iron and thus obtain pig at first cost. Heretofore the pig iron was bought from other iron manufacturers. The deal appears to be one of the most gigantic and far-reaching yet developed in the Southern iron field.

A torpid liver causes depression of spirits, indigestion, constipation, headache. Use Dr. M. A. Simmons' Liver Medicine to stimulate that organ.

We Want Good Roads—Tire Resistance.

A correspondent of the Wilmington (Del.) News says: "The use of a broader-tired wagon does not meet with favor by all, for some people allude to them as 'team killers.' In moving a loaded wagon the force of resistance is in the tires. Consequently, the force of resistance would be twice as great in a six-inch tire as in a three-inch one, the kind now in use." How altogether ludicrous! And since the force of resistance of a three-inch tire is only half that of a six-inch tire, that of a one-inch tire must be only one-third that of a three-inch tire. Then why not narrow the tire down to the width of the back of a case knife? Why, because the narrower the tire the deeper it cuts into the average road, and the greater the force of resistance it has to overcome. That's why a six-inch tire pulls easier, according to all scientific tests, than does a three-inch one. Such misinformation as is being spread about in such statements as above referred to will all have to be lived down, until the people get to doing a little thinking and experimenting for themselves, and then—

They'll get wide tires.

Wide tires maintain good roads and improve poor ones.

Used during expectancy, Simmons' Squaw Vine Wine or Tablets cheer and strengthen mothers, shorten labor and rob confinement of its terrors.

Care of the Eyes.

Up to forty years of age, bathe the eyes twice daily with cold water. Avoid reading when lying down or mentally or physically depressed. When the eyes are tired rest them by looking at objects from a distance. Old persons should avoid reading, as by artificial light; be guarded as to diet, and avoid sitting up late at night.

Avoid stimulants and drugs which affect the nervous system, especially when they are known to exert an injurious influence.

After 50 years of age bathe the eyes mornings and evenings with water so hot that you would wonder how you would stand it, follow this with cold water. That will make them glow with warmth.

Do not give up in despair when you are informed that a cataract is developing. Remember that in these days of advancing surgery it can be removed with little danger to the vision.

CASTORIA. The Kind You Have Always Bought.

Signatures of Charles H. Fletcher.

Citizen Josh for Governor.

The Dillon correspondent to the State of the 26th, has the following to say in regard to the dispensary rat case:

"This is almost a strictly temperance community now. Some of the toughest sons have suddenly become total abstainers, so far as dispensary rat juice is concerned. Ask them to 'smile' and they greet you with a shake of the head and a shudder and a gag, and simply answer 'rat-juice.' Josh Ashley has done more for temperance hereabouts than all the temperance organizations put together and he ought to be a candidate for governor next year on a platform of 'Low tax tags, anti-temperance, anti-penitentiary favors and anti-rat-juice.' Hurrah for Josh. PROHIBITIONIST.

Dillon, S. C. March 31.

## ROYAL BAKING POWDER.

ABSOLUTELY PURE. Makes the food more delicious and wholesome.

ROYAL BAKING POWDER CO., NEW YORK.

## NEWS OVER THE COUNTRY.

INCIDENTS AND HAPPENINGS OF A FEW DAYS' LAST WEEK.

Short Items of Interest to Many—The Agricultural Hall to Be Made a Hotel.

The Agricultural Hall, in Columbia, which was at one time used as the State dispensary, is being remodelled, and, by the last of this week, will be opened as the Albermarle Hotel.

Suicide in Bamberg. David Phillips, white, aged about 60 years, committed suicide at Bamberg on March 28th. He had been on a drunken spree for several days and told several of his friends he intended killing himself, but no attention was paid to his talk. He procured a bottle of laudanum, went to his home, drank it and went to bed and a few hours afterward was found dead. He had written a letter of instruction as to the disposition of his property, showing that he fully intended carrying out his threats.

City Hall in Columbia Burns. The city hall building in Columbia, S. C., was totally destroyed by fire last Thursday night. It was the most destructive fire Columbia has suffered since Sherman's army laid the city in ruins. The building was a large three-story structure, containing the Columbia Opera House, council chamber, Mayor's court, police headquarters, two stores, meeting rooms of various lodges and the Governor's Guards' armory. Nothing was left standing save a few fragments of wall. The loss is \$75,000 covered by \$30,250, insurance. The cause of the fire is unknown. The Postal Telegraph Company's office, occupying the adjoining building, was also destroyed.

Heavy Winds on March 27th. Saluda, Spartanburg, Union and Florence counties suffered considerable damage from the wind on the 27th ultimo. No lives are reported lost, but several persons were badly injured, houses blown down, roofs lifted, and, in places, fences and timber were laid low for miles. Hail accompanied the wind storm and much damage was done to vegetation.

The Effects of Wood Alcohol. It is said that some of the blind tigers in Yorkville are dispensing wood alcohol, whatever that may be, and on last Saturday night Will Johnson, colored, died from the effects of drinking it within six hours after being discovered in the barn of his employer in a drunken stupor. No inquest was held, there being no evidence of foul play.

Bride's Head Almost Brought Off. A special from Naylor, Lowndes county, Georgia, under date of March 31, says: "Mrs. J. A. Turner, a bride of a few months, was lying on the floor with her head in the fire when her husband went home to dinner-to-day. She had been slightly indisposed, and it is thought she fainted and fell. Her head was almost entirely consumed by the fire."

STATE OF OHIO, CITY OF TOLEDO, ss. Frank J. Cheney makes oath that he is the senior partner of the firm of F. J. Cheney & Co., doing business in the City of Toledo, Ohio, and State of Ohio, and that said firm will pay the sum of One Hundred Dollars for each and every case of Catarrh that cannot be cured by the use of Hall's Catarrh Cure. FRANK J. CHENEY.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1890. A. W. GLEASON, Notary Public.

Hall's Catarrh Cure is taken internally and acts directly on the blood and mucous surfaces of the system. Send for testimonials, free. F. J. CHENEY & CO., Toledo, O. Sold by Druggists, etc. Hall's Family Pills are the best.

The Cowpens Memorial Association intends to have that famous battle ground suitably cared for. They propose also to have a notable celebration at the battle ground on the 27th of May.

Malaria cannot find a lodgment in the system while the liver is in perfect order. Dr. M. A. Simmons' Liver Medicine is the best regulator.

Uncle Sam gets something over \$30,000,000 a year in taxes out of tobacco.

Medicinal Value of Lemon Juice. Lemon juice, sweetened with sugar, or crushed sugar, is a most refreshing and throat softening agent. It is a hard surface, out of the mouth, and work it down the throat with a fork, then swallow.

During the warm months of coolness, comfort and health can be produced by a lemonade. For six large lemonades use six large rolls on a hard surface. Lemon juice can be easily extracted and sliced. Add sufficient sweetener, and stir it well. Juice before adding the lemonade. For six large lemonades use six large rolls on a hard surface. Lemon juice can be easily extracted and sliced. Add sufficient sweetener, and stir it well. Juice before adding the lemonade.

Hot lemonade will break a cold if taken at the start. It is the same as cold lemonade, only using water instead of cold. Use about one-half as much lemon as cold lemonade. A piece of lemon, or moistened with lemon juice, on a corn, will cure it in a moment. The heat of the will produce soreness, but ment is persisted in for a length of time a cure will be effected.

The discomfort caused by tender feet may be lessened entirely cured, by applying lemon on the feet.

To cure chilblains, take lemon, sprinkle fine salt over it, and rub the feet well. Repeat three or four times.

Lemon juice will relieve tooth and vegetable stains on the face. After having the hands in the suds rub them with a piece of lemon. This will prevent chapping and make the hands soft and white.

Menstruation made regular, less, and pain in sides, hips, etc., cured by Simmons' Squaw Vine Wine or Tablets.

Food for the Sick. Any one who ever had the responsibility of caring for an invalid realizes the necessity frequently necessary to get him to take the nourishment required. One is prejudiced against milk, a declares he cannot and will not take it. For such an one another tea is recommended, which may be made almost entirely of oyster furnishing the salts, which is about all that is necessary. For the patient who does against the sight of beef, fish, etc., overcooked, which causes indigestion, red color, or indigestion, which takes away the appetite, which are the best part of the beef tea in that.

Various custards and puddings, especially of cream, are used with eggs, cream, and sugar. Salted and chilled, these are sometimes rendered very grateful to the patient who wants something, but doesn't know just what.

CASTORIA. The Kind You Have Always Bought. Signatures of Charles H. Fletcher. A Boy's Essay on Hornets.

A hornet is the smartest bug that flies anywhere. He comes when pleasures and goes when he gets angry. One way a hornet shows his smartness is by attending to his own business, and making every one interfere with him wish the same thing.

When a hornet stings you, he knows it and never stops about it as long as his sting listens to him. One stung my pa (my pa) on the nose, and he had a pastoral visiting for a month, taking that hornet.

Another way a hornet shows his smartness is by his preparation. If he has any business, he will attend to it at once, and leaves you to think it over to yourself. He don't do like the man who comes fooling around for an hour singing, "Come, come, and then, when he has led you in, dashes away yelling, 'Kin.' A hornet never bleeds, but if he sticks you he will go on as well.

I don't know anything about hornets, only that Josh Ashley is a 'A hornet is an inflexible creature, a poor speller, buzzer, and an impudent, and hasty in his actions.' Mothers wishing to show their children how to give them Simmons' Wine or Tablets as they grow.
